Abstract:

Based on a formulation of Plebansky for gravity we develop the self-consistent $Spin(4, 4)$ -invariant model of the unification of gravity with weak $SU(2)$ gauge and Higgs fields in the visible and invisible sectors of our Universe. We consider a general case of the Graviweak unification, including the higher-derivative super-renormalizable theory of gravity, which is unitary, asymptotically-free and perturbatively consistent theory of the quantum gravity.
