Datum: srijeda, 25. studenoga 2015.

Vrijeme : **11 sati c.t.**

Mjesto: IRB, dvorana I krilo

Abstract:

We consider a model of a holographic braneworld universe in which a cosmological fluid occupies a 3+1 dimensional brane located at the boundary of the asymptotic AdS_5 bulk. We combine the AdS/CFT correspondence and the second Randall-Sundrum (RSII) model to establish a relationship between the RSII braneworld cosmology and the boundary metric induced by the time dependent bulk geometry. In the framework of the FRW cosmology some physically interesting scenarios will be discussed involving the RSII and holographic braneworlds.
