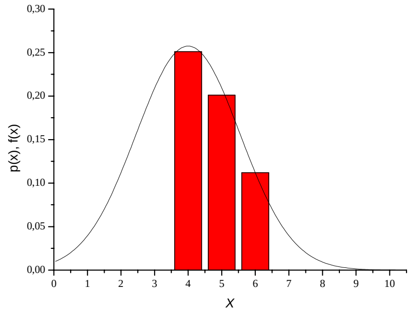
Standardiziranje općenite normalne raspodjele

$$X \sim N\left(\mu,\sigma^2\right)$$

uvodimo slučajnu varijablu $Z=\dfrac{X-\mu}{\sigma}$

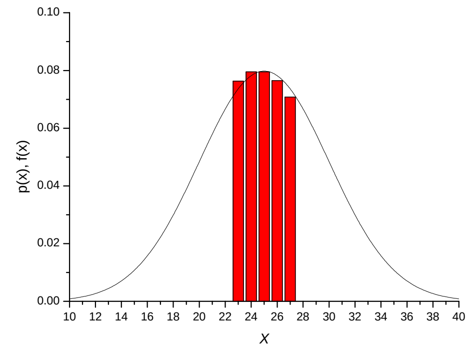
Gaussova aproksimacija binomne

$$X \sim \mathrm{Bin}(n,p) \quad\rightarrow\quad X \sim \mathrm{N}(np,npq)$$



Gaussova aproksimacija Poissonove

$$X \sim \mathrm{Po}(\lambda) \quad \to \quad X \sim \mathrm{N}(\lambda, \lambda)$$



Raspodjela	Ograničenja	Aproksimacija
$X \sim \mathrm{Bin}(n, p)$	n velik (>50) p malen (<0,1)	$X \sim \mathrm{Po}(np)$
$X \sim \mathrm{Bin}(n, p)$	n>10, p≈½ ili n>30, p≠½	$X \sim \mathrm{N}(np, npq)$
$X \sim \mathrm{Po}(\lambda)$	λ>20	$X \sim \mathrm{N}(\lambda, \lambda)$

Najvjerojatnija vrijednost mjerene veličine

Mjerimo veličinu X, a njezina prava vrijednost je x_p koju ne znamo.

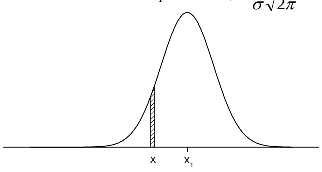
Mjerni instrument daje standardna odstupanja σ.

Obavimo *jedno* mjerenje i rezultat je x_1.

Tražimo najvjerojatniju vrijednost za x_p.

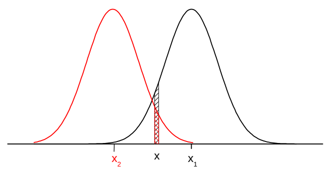
Vjerojatnost da je x_p u intervalu $(x, x+\Delta x)$ iznosi:

$$\Delta P_1 = P\left(x \le x_p \le x+\Delta x\right) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-x_1)^2}{2\sigma^2}} \cdot \Delta x$$



Obavimo *dva* mjerenja i rezultati su x_1 i x_2.

Tražimo najvjerojatniju vrijednost za x_p.



Vjerojatnost da je x_p u intervalu $(x, x+\Delta x)$ iznosi:

$$\Delta P = \Delta P_1 \cdot \Delta P_2 = P\left(x \le x_p \le x+\Delta x\right) = \frac{1}{\left(\sigma\sqrt{2\pi}\right)^2} \cdot e^{-\frac{(x-x_1)^2+(x-x_2)^2}{2\sigma^2}} \cdot (\Delta x)^2$$

Obavimo n mjerenja i rezultati su $x_1, x_2, \ldots x_n$.

Vjerojatnost da je x_p u intervalu $(x, x+\Delta x)$ iznosi:

$$\Delta P = \Delta P_1 \cdot \Delta P_2 \cdots \Delta P_n = \frac{1}{\left(\sigma\sqrt{2\pi}\right)^n} \cdot e^{-\frac{1}{2\sigma^2}\sum_{i=1}^{n}(x-x_i)^2} \cdot (\Delta x)^n$$

Najvjerojatnija vrijednost x_p je onaj x za koji gornja funkcija ima maksimum.

$$\sum_{i=1}^{n}(x-x_i)^2 = \min$$

To zovemo "**princip najmanjih kvadrata**".

Za koji x_p^* je zbroj kvadrata odstupanja minimalan?

$$\frac{\partial}{\partial x}\sum_{i=1}^{n}(x-x_i)^2 = 0$$

$$-2\sum_{i=1}^{n}\left(x_i - x\right) = 0$$

Za najvjerojatniji x_p^* vrijedi:

$$\boxed{x_p^* = \frac{1}{n}\sum_{i=1}^{n} x_i = \overline{x}}$$
